Activity 5 Scale – of your desk

Try this exercise.

Study pages 15 & 16 in the lesson notes. Contact your teacher if you need some extra advice.

| 1. | Draw a straight | line 10cm | long without | using your | ruler. |
|----|-----------------|-----------|--------------|------------|--------|

| Measure yo | our line ca | refully | with your | ruler. | | | | | |
|---|-------------------------|------------------|-----------------------|---------------------------|------------------------|----------------------|------------------------|---------|--|
| Were you o | a good jud | ge of 10 | Ocm dista | nce? _ | | | | | |
| Now let's make a map of the top of your desk. Measure its length and width. These distances just don't fit on to the page or paper. | | | | | | | | | |
| Problem: H really is. ` below as a only one-te | Your desk line one-t | might enth as | be about long, tha | 100 centi t is, a line | metres lo 10cm long | ng. Rule . Now di | it in the raw anoth | e space | |
| | | | | | | | | | |
| 1 | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| 10. | | | | • | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |

The result is a simple map. It is probably a small rectangle, much smaller than the real desk it shows. Your have drawn a map of your desk to scale. The size of the desk is only one-tenth its real size. The scale of your map is 1 to 10, because 1cm on the map shows 10cm on the desk. So scale is a RATIO.
